PROFILE

Computer Science graduate (Cyber Security and AI specialization, specialization-year average 96) who builds security tooling, from a real-time Python IDS mapped to MITRE ATT&CK to a honeypot deception layer. IT System Administrator at Earnix (fintech, ~450 employees), hands-on with the controls attackers face: Conditional Access, firewall policy and Defender XDR detections.

EXPERIENCE

IT System Administrator Nov 2025 - Present
Earnix

- Triaged Microsoft Defender XDR incidents and wrote KQL custom detection rules; investigated alerts escalated by the managed SOC, validated device and user activity, and returned verdicts.
- Designed and enforced Conditional Access policies for ~450 users as Zero Trust controls: MFA and SSO, legacy authentication blocking and device compliance gating.
- Administered next-generation firewall security policies, NAT and objects, investigated alerts in firewall logs, and supported VPN remote access with SAML authentication.
- Configured Entra ID Enterprise Applications with SAML SSO, MFA, user provisioning and group-based access, reconciling application-side users against Entra assignments.
- Investigated employee-reported phishing (headers, SPF, DKIM, DMARC, links) and handled incidents, allowlists and policies in an email security platform.

Computer Technician | *Malam Team* 2025

PROJECTS

Evation Cyber Platform | capstone, grade 100 | github.com/yanivbahalul/Evation-cyber-platform

- Full stack security and deception platform with an API gateway and real-time telemetry (Socket.IO); built the deception layer: honeypots, tarpits and dynamic decoy dashboards.

SniffGuard | solo project | github.com/BarDev1999/SniffGuard

- Real-time IDS in Python (Scapy, BPF) detecting SYN, FIN, NULL and XMAS stealth scans, mapped to MITRE ATT&CK T1046, with a live alert dashboard and automatic pcap capture for forensics.

EDUCATION

B.Sc. Computer Science | Holon Institute of Technology (HIT) June 2026
Cyber Security and AI specialization. Specialization-year average 96, cumulative 86. Courses: Reverse Engineering & Malware Analysis (100), Computer Security (100), Network & Internet Security (90).

SKILLS & LANGUAGES

Offensive & Network: Kali Linux, Nmap, Metasploit, Burp Suite (academic), TCP/IP, DNS, DHCP, network segmentation
Detection & Analysis: Wireshark, pcap forensics, IDS (Scapy, BPF), stealth scan detection, vulnerability assessment, MITRE ATT&CK, KQL detection rules
Development: Python (Flask, FastAPI), PowerShell, Microsoft Graph API, Bash, SQL, Git, Linux
Training: SEED Labs: packet sniffing and spoofing, ARP poisoning, DNS attacks, RSA
Languages: Hebrew (native), English (fluent)
Military Service: Combat soldier, Israel Border Police (Magav)
