

BAR SBERRO

Identity & Cloud Security | SOC / Detection

Central District, Israel | 054-9849203 | barsgh@gmail.com
[linkedin.com/in/bar-sberro](https://www.linkedin.com/in/bar-sberro) | github.com/BarDev1999 | bardev1999.github.io

Computer Science graduate (B.Sc., Holon Institute of Technology, 2026; final specialization-year average 96) running identity, endpoint, and cloud security operations on Microsoft Entra ID and Conditional Access for Earnix, a fintech of about 450 employees. Strong Python and PowerShell developer with a hands-on security portfolio: a real-time network IDS, a full-stack deception platform, and an LLM red-teaming framework. Targeting a junior Identity / Cloud Security or SOC / Detection role.

CORE SKILLS

Identity & Cloud	Microsoft Entra ID (Azure AD), Conditional Access, MFA/SSO, Identity & Access Management (IAM), Joiner-Mover-Leaver lifecycle, Active Directory & GPO, Microsoft Purview (DLP), least-privilege access
Detection & Analysis	Entra ID sign-in / audit log monitoring, MITRE ATT&CK, network traffic analysis, IDS/IPS (Scapy, BPF), Wireshark / pcap forensics, stealth-scan detection, vulnerability assessment
Endpoint & Infra	Intune (Windows), Kandji (macOS), Microsoft Defender, VPN & firewall configuration, network segmentation
Programming	Python, PowerShell, Bash, SQL, Microsoft Graph API, Linux, Git

EXPERIENCE

IT Specialist — Identity, Endpoint & Cloud Security Operations | Earnix (fintech, ~450 employees) Nov 2025 – Present

Frontline identity, endpoint, and cloud security operations across Microsoft 365, Entra ID, and hybrid Active Directory for ~450 users.

- Designed and enforced **Conditional Access** policies across ~450 users as Zero Trust controls: mandating MFA/SSO, blocking legacy authentication, and gating resource access on Intune / Kandji device compliance.
- Built **PowerShell + Microsoft Graph API** automation for the full joiner-mover-leaver identity lifecycle across Active Directory, Entra ID, M365, and Exchange, enabling same-day offboarding and eliminating orphaned access.
- Monitored **Entra ID sign-in and audit logs** for anomalous authentication and risky sign-ins; investigated and escalated true positives.
- Enforced **Data Loss Prevention (DLP) via Microsoft Purview** and endpoint security baselines through Intune (Windows) and Kandji (macOS) across the fleet.
- Administered **VPN, firewall rules, and network segmentation** to enforce least-privilege network access.

Computer Technician | Malam Team

2025

- Troubleshoot TCP/IP, DNS, and DHCP and performed endpoint hardening across client environments.

SECURITY PROJECTS

SniffGuard — Real-Time Intrusion Detection System *Python, Scapy, BPF, Wireshark* github.com/BarDev1999/SniffGuard

- Built (sole developer) a real-time IDS detecting four stealth scan types (SYN, FIN, NULL, XMAS), mapped to **MITRE ATT&CK T1046** (Network Service Discovery).
- Implemented a live alerting dashboard and automated pcap capture for Wireshark forensic analysis and IOC extraction.

Eviation Cyber Platform — Security & Deception Platform *Capstone, graded 100* github.com/yanivbahalul/Evation-cyber-platform

- Team capstone security platform with an admin dashboard, API gateway, and real-time telemetry (Socket.IO) for traffic monitoring and threat logging.
- Built the **deception engine** layer (honeypots, tarpits, dynamic decoy dashboards) generating attacker-interaction intelligence and early-warning signals.

LLM Red-Teaming & ML-Guided Threat Classification *Python, multi-agent, scikit-learn* github.com/YuriMatyash/ML-Guided-Cyber-Security

- LLM red-teaming:** automated adversarial framework with a multi-agent judge-and-mutator architecture to probe LLM guardrails; evaluated on **JailbreakBench** across four harm categories (aligned to the OWASP LLM Top 10).
- ML classification:** supervised pipeline classifying malicious versus benign network traffic with feature selection and cross-validation.

EDUCATION

B.Sc. Computer Science — Cybersecurity & Artificial Intelligence specialization | Holon Institute of Technology (HIT), Israel 2023 – 2026

- Final specialization-year average: 96** (cumulative 86)
- Relevant coursework: Reverse Engineering & Malware Analysis (100), Computer Security (100), Introduction to AI-Driven Cybersecurity (100), Machine Learning (100), Network & Internet Security (90), Software Engineering (94), Databases (92)

TRAINING & LABS

- 6 SEED Labs** (packet sniffing/spoofing, ARP poisoning, IP/ICMP, local & remote DNS attacks, RSA) · github.com/BarDev1999/seed-labs · **TCM Security** Practical Ethical Hacking

Languages	Hebrew (native), English (fluent)
Military Service	Combat soldier, Israel Border Police (Magav), full mandatory service
Volunteer	Perach national mentoring program (2023)
